Make your research be understood and valued: Libraries are for everyone, (legal) research too!

A Rights-Based Inter-Legal Approach to Artificial Intelligence

by Dr. Elif Biber

How can European public law effectively address the profound rights challenges posed by AI systems?

This groundbreaking book delves into this pressing question by critically analysing the limitations of current regulatory frameworks, including the Artificial Intelligence Act, the General Data Protection Regulation, and European human rights law. Drawing on leading judgments from the European Court of Human Rights and the Court of Justice of the European Union, the book explores real-world case studies of AI systems employed by public authorities, highlighting their impact on fundamental rights.

Rich with legal insights and practical methodology, this book presents a three-step adjudication model to integrate the inter-legal approach into European legal practice, paving the way for a more robust protection of fundamental principles, rules and rights in the AI era. Essential reading for scholars, policymakers and practitioners, this work redefines how Europe can lead the charge in responsible AI regulation.

The LCEL Library Talks are an initiative aimed at fostering a collaborative and engaging environment within the LCEL Library premises by hosting talks about research publications and services for researchers.

Registration until 23.11.2026

In person only
